

Department of Health Provides Update on COVID-19, 962 Positives Bring Statewide Total to 104,358

Harrisburg, PA - The Pennsylvania Department of Health today confirmed as of 12:00 a.m., July 23, that there are 962 additional positive cases of COVID-19, bringing the statewide total to 104,358. All 67 counties in Pennsylvania have cases of COVID-19.

Allegheny is reporting an increase of 147 cases, and Philadelphia is reporting an increase of 311 cases. Since there was no data reported from Philadelphia yesterday, the number of new cases is a culmination of cases from the past two days.

The number of tests administered within the last 7 days between July 16 and July 22 is 147,837 with 5,731 positive cases. There were 19,626 test results reported to the department through 10 p.m., July 22. These results represent the total number of tests administered.

There are 7,079 total deaths attributed to COVID-19, an increase of 16 new deaths reported. County-specific information and a statewide map are available on the [COVID-19 Data Dashboard](#).

“As the state has put in place new mitigation efforts to offset recent case increases, we must renew our commitment to protecting against COVID-19 by wearing a mask, practicing social distancing and following the requirements set forth in the orders for bars and restaurants, gatherings and telework,” Secretary of Health Dr. Rachel Levine said. “Pennsylvania has been a model for the country on how to reopen effectively using a careful, measured approach. However, we know the virus has not gone away as we see cases rise, so we must work together to stop another surge.”

Mask-wearing is required in all businesses and whenever leaving home. Consistent mask-wearing is critical to preventing the spread of COVID-19.

There are 637 patients who have a positive serology test and either COVID-19 symptoms or a high-risk exposure, which are considered probable cases and not confirmed cases. There are 981,259 patients who have tested negative to date. Of the patients who have tested positive to date the age breakdown is as follows:

- 1% are ages 0-4;
- 1% are ages 5-12;
- 3% are ages 13-18;
- Nearly 9% are ages 19-24;
- 37% are ages 25-49;
- 23% are ages 50-64; and
- 25% are ages 65 or older.

Most of the patients hospitalized are ages 65 or older, and most of the deaths have occurred in patients 65 or older.

The department is seeing significant increases in the number of COVID-19 cases among younger age groups, particularly 19 to 24-year-olds. [An alert was sent to healthcare providers](#)

about the changing COVID-19 case demographics, as there are more cases in younger age groups than in those 50-64 and 65+. The following regions have seen significant increases among 19 to 24-year-olds in each month from April to present in July:

- SW – Approximately 5 percent of cases in April to approximately 20 percent of cases so far in July;
- SE – Nearly 5 percent of cases in April to approximately 18 percent of cases so far in July;
- NE – Approximately 6 percent of cases in April to approximately 16 percent of cases so far in July;
- NW – Nearly 7 percent of cases in April to nearly 14 percent of cases so far in July; and
- NC – Approximately 8 percent of cases in April to nearly 13 percent of cases so far in July.
- SC – Approximately 7 percent of cases in April to nearly 14 percent of cases so far in July.

In nursing and personal care homes, there are 18,892 resident cases of COVID-19, and 3,707 cases among employees, for a total of 22,599 at 804 distinct facilities in 60 counties. Out of our total deaths, 4,829 have occurred in residents from nursing or personal care facilities.

Approximately 7,752 of our total cases are in health care workers.
